TOP SECRET

Figure 7

The figure consists of two vertically stacked line plots sharing a common x-axis labeled '(n) Number of Symbols' ranging from 0 to 200.

The top plot is titled 'Echo signal'. The y-axis is labeled 'Relative Signal Strength' and ranges from 0 to 1. The plot shows a highly fluctuating signal that starts at 0, rises sharply to about 0.9 by symbol 10, and then continues to fluctuate between approximately 0.4 and 1.0 for the remainder of the 200 symbols.

The bottom plot is titled 'Residual echo signal'. The y-axis is labeled 'Relative Signal strength' with a multiplier of $\times 10^{-3}$ at the top, and ranges from 0 to 5. The plot shows a signal that starts at 0, rises to a peak of about 2.8 at symbol 10, drops to 0 by symbol 30, and then exhibits large fluctuations between 0 and 5 for the rest of the 200 symbols.

Figure 10

SNR at the output of equalizer		
Test Loops	2 Mbaud	4 Mbaud
Loop #1	50 dB	30 dB
Loop #2	35 dB	25 dB
Loop #3	35 dB	30 dB
Loop #4	35dB	27 dB
Loop #5	40 dB	27 dB
Loop #6	30 dB	25 dB
Loop #7	32 dB	22 dB
Loop #8	40 dB	28 dB
Loop #9	30 dB	22 dB
Loop #10	25 dB	15 dB
